"Design, build, and control cool robot optimally!"

Skills

Able to design, build and control a complex robot system except for the circuit independently; manage and work with dozens of people (35 Formal and 45 preparatory team members typically); handle more than ten robotics projects whose development cycle is about one year at the same time.

Mechanic	Design robot prototypes rapidly using Fusion 360, Solidworks. Manufacture using CNC and 3D print.
Control	Experience using Trajectory Optimization, MPC, TVLQR, LQR, PID controller on real robots.
Framework & Tools	Frequent use of ROS1 with ros-control, Gazebo and Linux. Beginner of Casadi, qpOASES and Github Actions.
Programming	C++, Python, OpenCV, MATLAB, LaTeX.
Languages	Chinese (Native), English (Fluent).

Experience

Undergraduate Research, SUSTech CLEAR Lab (Prof. Wei Zhang)

Online & Shenzhen, China

Researcher Intern — *Nov 2021 – March 2022*

- Development of cheetah_ros, a hardware and simulation interface of quadruped robot (Unitree's Aliengo) based on ros-control, and Cheetah-Software.
- Working on control the quadruped robot bumps the ball in the air to the desired position using trajectory optimization and MPC.
- Research results submitted to IROS2022 (under review, download link)
  Title: Real-time Trajectory Optimization and Control for Ball Bumping with Quadruped Robots
  Author List: Qiayuan Liao*, Hua Chen, Wei Zhang

Full-Stack Developing and Management, GDUT DynamicX Robotic Team

Guanzhou, China

Captain & Founder — *Oct 2019 - Oct 2021*

- Found and lead a team of up to 45 people in participated RoboMaster Robotics Competition which required us to design, build and control 7 different robots. More than 400 universities around the world participated and 8000 young engineers competed on the stage.
- Designed and manufacture the mechanical structure of mecanum and swerve chassis, 2-axis gimbal, ball shooter, and 5-axis robot arm. Supervised all the designs before manufacturing.
- Developed rm-controls an control and simulation framework for RoboMaster competition robot based on ROS. Implemented the PID, LQR, and some kinematics algorithms and programs of the robots mentioned above before.
- Developed a ROS driver of the high-speed camera made by Daheng Image, and a targe detecting and tracking program for Robomaster competition robot using OpenCV.

Intern(RoboMaster High-School Summer Camp), DJI Technology Co., Ltd.

Shenzhen, China

Emebbed Developer — *2018 summer, 2019 winter & summer*

- Use PID to control BLDC motor by CAN interface on STM32 and DJI Manifold(Jetson TX2).
- Control Mecanum wheel chassis's velocity and position of 3-axis robot arm's end-effector using kinematics.
- Localization accounting AprilTag and IMU, navigate using navigation ROS package.

Full Stack Developing, High & Middle schools

Chaozhou, China

Individual developer — *2015 - 2018*

- Reproduced several open-source FDM 3D printers (kossel) in middle school.
- Developed a novel desktop Selective-Laser-Sintering 3D printer in high school.

Education

GDUT (Guangdong University of Technology)

Guangdong, China

B.S. in Electromechanical Engineering — *Sept 2019 - Expected June 2023*

Honors & Awards

International

2021	**Top 32 Team, Second Prize**, RoboMaster University Championship	*Shenzhen, China*
2018	**First Place**, Danish National Finals for Young Scientists and Inventors	*Copenhagen, Denmark*

Domestic

2022	**Third Prize**, RoboMaster University Championship	*Shenzhen, China*
2019	**Champion**, RoboMater Winter Camp for High School Students	*Shenzhen, China*
2017	**First Prize**, Guangdong Youth Science and Technology Innovation Competition	*Guanzhou, China*
